

## **DIGITAL RETINAL IMAGING**

### **THE BEST \$19.00 YOU WILL EVER SPEND**

Our office has the latest technology to detect and document the following sight threatening conditions:

Glaucoma  
Diabetes  
Age Related Macular Degeneration  
Hypertension

Digital Retinal Imaging is a quick, easy and painless way to look inside the eyes to detect and identify potential signs of retinal eye disease. These digital images are saved electronically and used annually for future comparisons.

Our goal with this technology is to preserve your vision and prevent vision loss. To do this, Dr. Tilson needs your help by having this procedure today. Together, you will both review the digital retinal images and see for the first time what Dr. Tilson sees.
